PROFESSIONAL SUMMARY

Developed a production-grade Python ETL pipeline with unit, integration, and end-to-end test coverage, comprehensive logging, and automated code quality checks, turning a messy fitness dataset into a clean, tested pipeline with a Streamlit dashboard. Building a full-stack marketplace application, developing cross-platform Flutter apps, and working daily alongside large-scale automated systems at Amazon have all reinforced the same principle: proper testing, clear documentation, and a practical approach are what separate code that works in a demo from software that holds up in production.

EDUCATION

Completed an intensive 12-week data engineering bootcamp covering Python programming, SQL, ETL processes, data pipelines, AWS cloud technologies, and Big Data tools (PySpark). Successfully achieved AWS Certified Data Engineer - Associate certification (January 2026), demonstrating proficiency in designing, building, and maintaining data engineering solutions on AWS.

The Data Science boot-camp covers Python, probability, statistics, data science libraries and fundamental machine-learning concepts. Achieved an overall grade average of 97% for the boot-camp tasks. Mastered Python programming within four months, enhancing coding skills and efficiency in data manipulation and analysis. Acquired hands-on experience with key data science libraries, including NumPy, pandas, and scikit-learn. Successfully completed three practical projects, such as creating a program for a small business to help it manage tasks assigned to each member of the team. Utilised a dataset to predict sale prices for houses in Ames, Iowa, using multiple linear regression in a Jupyter notebook.

Mastered advanced concepts in Lean and Agile methodologies, large-scale software engineering, and cutting-edge software architecture and security practices. My Dissertation focused on a comparative analysis of Flutter and React Native for small-scale mobile application development, showcasing proficiency in cross-platform development techniques.

Experienced in web development and mobile application design with a focus on projects that apply my knowledge effectively. I have studied modules such as Database Systems, AI & Data Mining, and Client-Server Systems. For my year project, I created an Android fitness application that showcased my skills in full-stack development and user-centred design.

CERTIFICATIONS

Generative AI Bootcamp: LLM Engineering, RAG & AI Agents | Udemy | Issued: June 2026

Google AI Professional | Google | Issued: May 20 2026

Microsoft Power BI - Beginner to Pro | Udemy | Issued: March 2026

AWS Certified Data Engineer - Associate (DEA-C01) | Amazon Web Services (AWS) | Issued: January 2026

Agile Explorer | IBM | Issued: November 2025

Cybersecurity Fundamentals | IBM | Issued: November 2025

Ethics of AI | University of Helsinki | Issued: November 2025

Data Science | University of Manchester & HyperionDev | Issued: April 2025

Programming for Everybody (Getting Started with Python) | University of Michigan | Issued: August 2023

PROFESSIONAL EXPERIENCE

I worked within the highly automated Amazon environment, using robotics, barcode scanners, and image recognition to keep the inventory up-to-date and ensure quick and accurate fulfilment of the customer’s orders. I became highly proficient working with people and in a fast-paced environment that requires order and precision, learning the ropes of one of the most advanced automated systems in the world.

PROJECTS & OUTSIDE EXPERIENCE

The Connect Talent CIO website is a modern, fully responsive digital platform designed to advance digital inclusion, accredited skills development, and community support for residents across Salford and Greater Manchester. Built using PHP, Tailwind CSS, and robust web security standards, the platform showcases the charity’s mission (Registered Charity No 1169975) while enabling seamless community interaction through intuitive pop-up forms for volunteering, device and financial donation pledges, resident referrals, and corporate partnership inquiries.

A web-based call management system and customer relationship management (CRM) application developed using PHP, SQLite, and Tailwind CSS for Connect Talent CIO. The application handles call logging, customer relations, dashboard analytics, import/export functionalities, and user authentication.

This Power BI dashboard provides a comprehensive analysis of UK online retail sales data spanning from 2009 to 2011. It delivers actionable insights into product demand, revenue performance, customer behaviour, and seasonal trends, enabling data-driven decision-making for retail stakeholders.

This Power BI project explores the adoption trends of Artificial Intelligence in education at a global level. The study covers the period between 2015 and 2026 and involves ten countries. These countries belong to five world regions: North America, Europe, Asia, South America, and Africa. The report provides insights into the adoption rates of the technology among students, teachers, and schools. In addition, it sheds light on the policies affecting education and demographic variables such as the urban-rural divide and gender gaps.

A Python ETL Capstone Project that demonstrates an end-to-end data engineering workflow. The project ingests data in the form of CSV fitness-related files, applies a suite of transformations and conversions, and subsequently stores the resulting datasets in various formats such as CSV and Parquet, with visualisations generated in the form of a Streamlit dashboard. The code behind the project is well-structured and adheres to software engineering principles, and employs a range of testing strategies, including unit, integration, and end-to-end testing, as well as SQL and code quality testing using tools such as flake8 and sqlfluff and logging throughout the pipeline for debugging and monitoring purposes.

This project involves developing a website for Connect Institute using WordPress. Connect Institute is the training and education division of Connect International Resources, which provides a comprehensive range of courses from Further Education diplomas to postgraduate MSc and PhD degrees, all of which contribute to career progression and development.

The project entails developing a complete WordPress website for an organisation called Connect International Resources. Connect International Resources Limited (CIR) is a UK-based international consultancy agency based in Salford, Manchester. It is a premier resource connecting people worldwide to education, employment opportunities, as well as professional development resources in the UK and abroad.

A cross-platform task and note management app developed in Flutter with Provider and Material 3 that provides real-time state synchronisation, local scheduled notifications, checklist creation, and dark mode on Android, iOS, Web, and Windows desktops.

A cross-platform mobile application for managing tasks built with React Native, Expo SDK 51, and Expo Router. The application provides full task lifecycle management, category and priority organisation, attachment support including images and documents, filtering, and offline data persistence.

A web-based classifieds and advert marketplace solution designed with PHP, Symfony, Doctrine ORM, and MySQL. The solution encompasses listing management, category-based filters, searchability, pagination, user role permissions, and an administrative moderation area.

An Android mobile application written in Kotlin designed to provide users with instructions for performing body-weight workouts. The application contains a number of exercises, detailed breakdowns on how to perform them, a timer for the workout intervals, text-to-speech instructions, and video tutorials.

A 2D Arcade Space Shooter ("Aliens & Asteroids") implemented in Java with JavaFX, featuring 720p widescreen graphics with parallax scrolling, laser-shooting mechanics, particle flame and explosion effects, power-ups, synthesised sound FX, and score tracking.

A production-level, event-driven, serverless data pipeline implemented on the AWS cloud platform in accordance with enterprise architecture principles. The application uses test-driven development and an infrastructure-as-code approach (AWS SAM) to design an automated data pipeline process that performs several stages of data ingestion and validation, saving the results of computation in two different data storage systems: the data warehouse (data lake) in the form of OLAP-column Parquet files (S3), and the OLTP key-value store (DynamoDB). The application features ad-hoc SQL queries and analysis through AWS Glue and Athena, and offers an interactive dashboard with time-based data visualisation using a serverless REST API.

[/Agent HQ projects]

- AutoApplyAI (Node, Docker, Express): Tailor your CV and cover letter to any job posting in British English, humanise the writing so it reads like a person wrote it, generate ATS-friendly PDFs, and fill appli
- Agent-HQ_V1 (Python): Enable the tracked pre-commit secret scan once per clone: https://github.com/praiseOjay/agent-hq.git
- praiseOjay: Building production-style data pipelines, cloud solutions, and full-stack digital applications using enterprise-grade tools and architecture patterns. https://github.com/praiseOjay/praiseOjay.git
- Portfolio_website (Web): A personal portfolio built with plain HTML, CSS and JavaScript: no framework and no build step. It has a warm editorial "paper and ink" design in light and dark, content https://github.com/praiseOjay/Portfolio_website.git
- Gym_app (Node, React): An offline-first strength-training app for Android (built with Capacitor, also runs in the browser). It tracks sets and progressive overload, estimates muscle recovery, a https://github.com/praiseOjay/Gym_app.git
- TaskManager (Node, React): A modern, cross-platform mobile application for efficient task management, developed using React Native, Expo SDK 51, and Expo Router. https://github.com/praiseOjay/TaskManager.git
- aws-serverless-data-pipeline (Python): An enterprise-grade, event-driven serverless data pipeline and real-time analytics platform built on Amazon Web Services (AWS) using Test-Driven Development (TDD) https://github.com/praiseOjay/aws-serverless-data-pipeline.git
- Marketplace_website (PHP): A modern, full-featured Marketplace & Classifieds Web Application built with PHP 8.2+, Symfony 7, Doctrine ORM, Twig, and Bootstrap 5. Designed wi https://github.com/praiseOjay/Marketplace_website.git
- AI Humaniser: A powerful web application that transforms AI-generated text into natural, human-sounding prose that passes AI detectors. https://github.com/praiseOjay/AI-Humaniser.git
- JavaFX-game: | Key | Action | https://github.com/praiseOjay/JavaFX-game.git
- notes_manager (Flutter): A feature-rich, high-performance, cross-platform task and notes management application built with Flutter, Provider, and Material 3. Works seamlessly across https://github.com/praiseOjay/notes_manager.git
- capstone_project (Python): A robust, enterprise-grade Python ETL (Extract, Transform, Load) pipeline and interactive Streamlit Analytics Dashboard built to process, clean, enrich, and visua https://github.com/praiseOjay/capstone_project.git

SKILLS

Unity, NumPy, Pandas, Scikit-learn, Natural Language Processing (NLP), Tableau, Data Science, C/C++, GitHub, Visual Studio Code, Eclipse, Android Studio, Xcode, VirtualBox, VMware, MVC, MVVM, OOP, Jupyter Notebook, Git, Python, iOS/Swift, Dart, Kotlin, Agile, Scrum, Symfony, React Native, Microsoft Office, Flutter, Java, PHP, SQL, C#, JavaScript, MySQL, HTML/CSS, Machine Learning, Poseidon, Design Patterns, Data Structures & Algorithms, Data Analysis, Adobe After Effects, Software Testing, Web Development, Seaborn, SpaCy, Linux/Unix, Bootstrap, Canva, PySpark, Prompt Engineering, LLM, Agile Leadership, Agile Management, Amazon Web Services (AWS), Application Development, Chemical Synthesis, Cloud Computing, Content Strategy, Cryptography, Cyber Security Assessment, Cybersecurity, Data Ingestion, Data Management, Data Security, Data Storage Technologies, Data Transformation, Editing, Image Generation, Information Security, Information Synthesis, Iterative Design, Kanban Principles, Linguistic Transcription, Prototyping, Research, Security Strategies, Social Engineering, Software Release Management, Threat Assessment, Threat Detection, User Stories, Vulnerability Management, Visual Storytelling, Data Visualisation, MongoDB, Technical Documentation, Code Review, Computer Science, Software Engineering, Data Engineering, Computer Graphics, Mobile Application Development, Software Quality Management, Software Architecture and Security, Front-End Development, Back-End Development, Full-Stack Development, Streamlit, Cursor, Google Antigravity, Gemini, Claude, LangChain, ChatGPT, DeepSeek, Ollama, Open Router, Adobe Photoshop, XAMPP, Slack, Power BI, GitBash, PowerShell, Wordpress, Firebase, Data Cleaning, ETL Pipelines, Web Scrapping, Test-Driven Development, Chart.js, Excel/Numbers/Sheets, Inventory Management, Kali Linux, Matplotlib, Maven, OpenAI, Operating Systems, Plotly, PowerPoint/Keynote/Slides, Quantitative Research, Tailwind CSS, Tensorflow, UI/UX Design, Unreal Engine, Word/Pages/Docs, Postgres, Agile Coaching, Agile Stand-ups, Cybersecurity Risk Management, Cyber Threat Analysis, Vibe Coding, Multimodal Prompting, Prompt Chaining, Responsible AI, NLP, Lean, Open WebUI, TurboLLM, Artificial Intelligence, Cyber Defence, Database Management System, SQLite, Node, Docker, Express, Web, React

ADDITIONAL

- British Citizen with a UK Passport & Full UK Driving Licence
- Relocation: Open to relocation
- Work Authorisation: Authorised to work in the UK for any employer
- Interests: Passionate about delving into the world of mobile application development and staying up to date with the mobile innovations that are reshaping our digital landscape, with enthusiasm for Virtual and Augmented Reality applications across different sectors. Also dedicated to contributing to open-source projects. Furthermore, I have an enthusiasm for utilising fitness and wellness technologies to enhance personal health goals and well-being pursuits.
